About the event: In legal terms, property refers to the set of rights that a person receives from the law as a result of owning and possessing an object. Intellectual property, on the other hand, refers to any property that has been generated by the use of the human mind. It is nonphysical (intangible), and its worth is derived from the concept (s). The term "intellectual property" has no universal definition. Knowledge and information have become major drivers of techno-economic growth and societal advancement in general, and the IP domain is rapidly expanding. As we understand it, intellectual property refers to mental creations such as inventions, literacy, and artistic works, as well as symbols, names, images, and designs utilised in trade. Today, we come into contact with intellectual property at every turn of our lives. From the design on the computers to the titles, paints, books, films, and music CDs, everything we come into contact with is protected by intellectual property. Understanding what is meant by the term property can help us better comprehend the notion of Intellectual Property (IP).

It is therefore critical to consider a formal education or course curriculum to encourage and train students, young researchers, academicians, and professionals to understand the complexities of intellectual property and how to register their innovation and invention in order to receive recognition and appreciation for their efforts.
